Connect your instrument to WiFi

Spectacular Labs touchscreen guide

Use these screens to join your site's Wi-Fi network. Start when the instrument is idle, with the network name and password ready. Lab Wi-Fi is an example network.

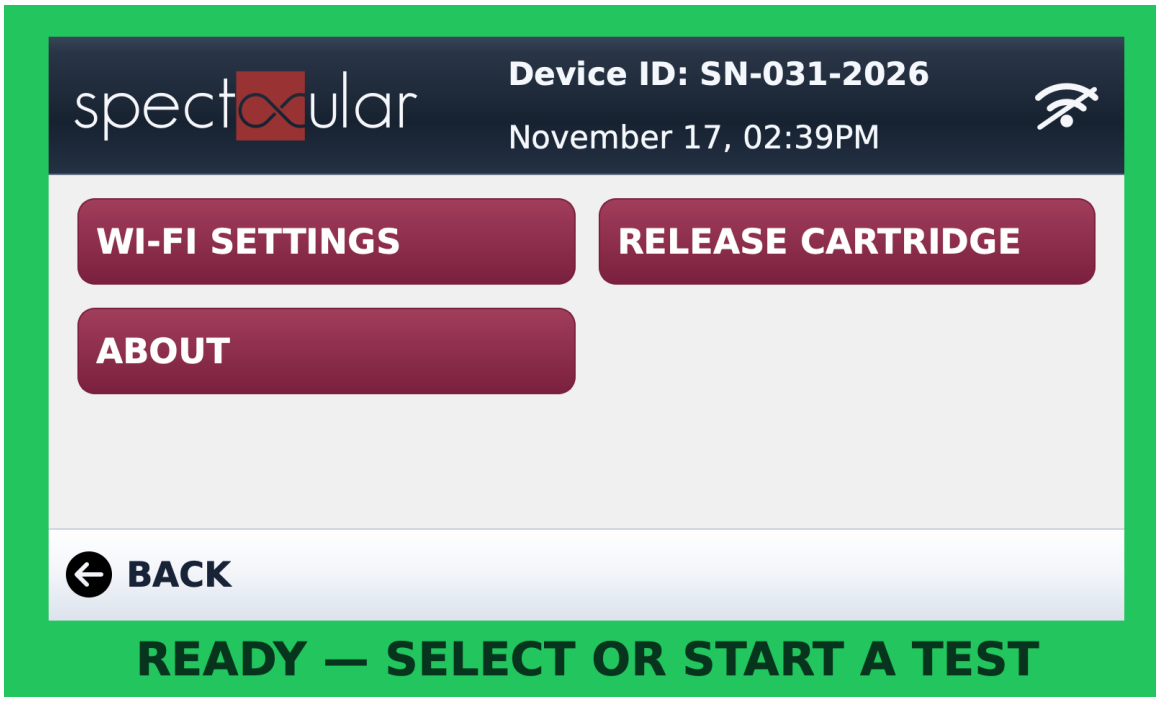

1 Open Settings

Tap **SETTINGS** on the main menu.

2 Open WiFi settings

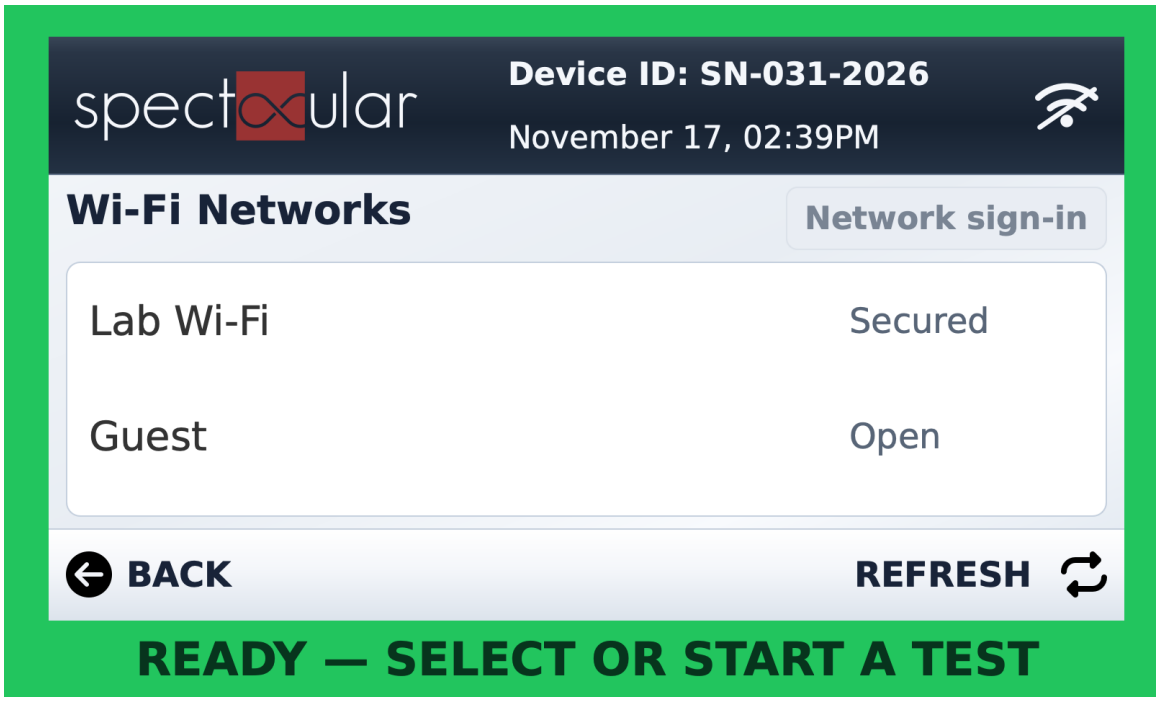

Tap **WI-FI SETTINGS**. The upper-right Wi-Fi icon is a shortcut to the network list.

Choose your network

3 Select the network

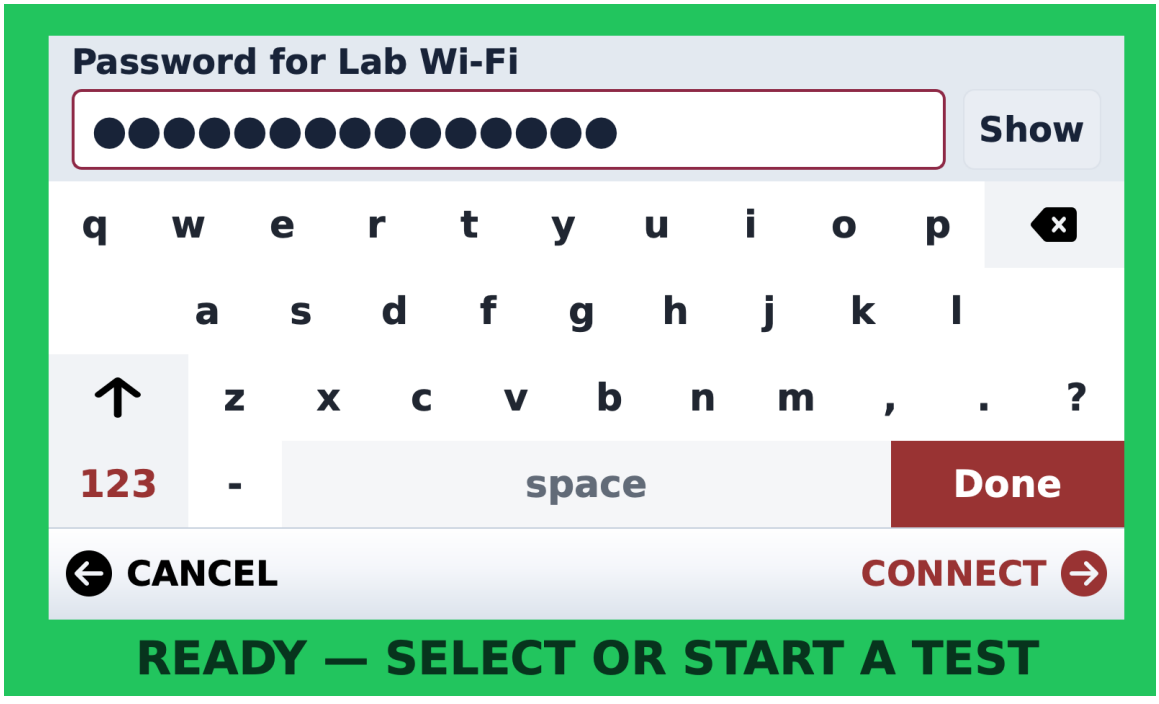

Swipe through the list, then tap your network. **REFRESH** scans again. If your row already says **Connected**, skip to step 7.

Secured networks need a password. **Open** networks connect without one; skip the password steps and continue at step 6.

4 Enter the WiFi password

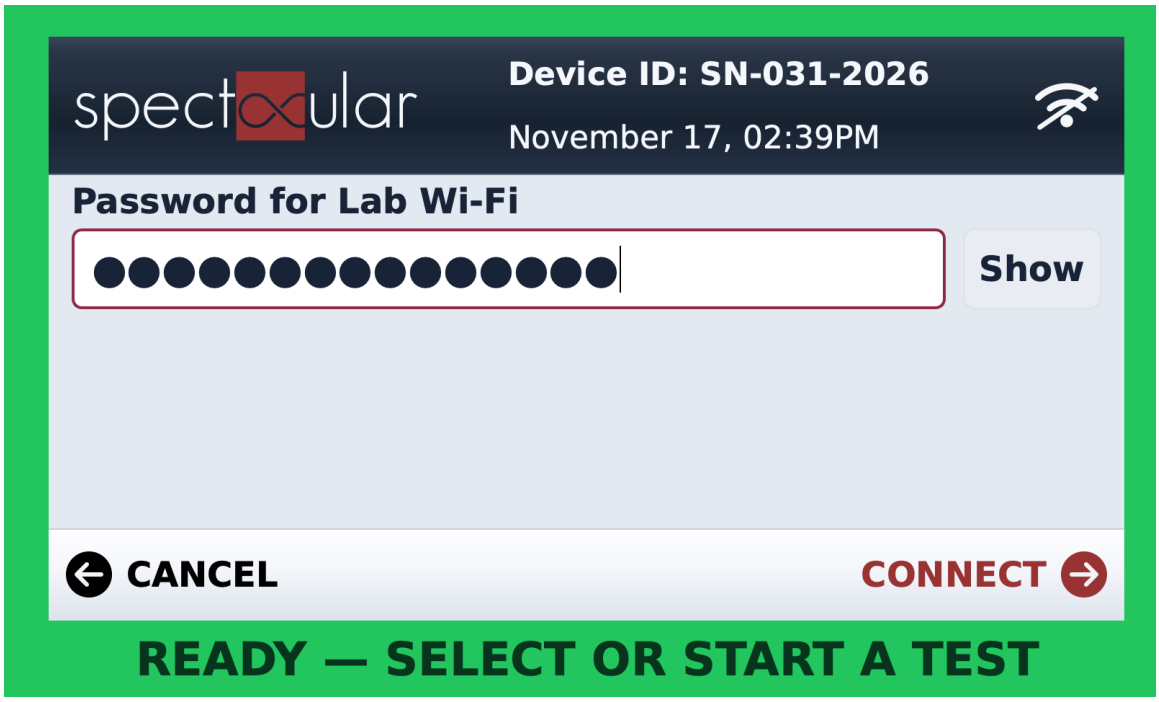

Type the password exactly. Use the up-arrow **Shift** key or **123** for capitals, numbers and symbols. Tap the keyboard's **Done** to hide typing.

Connect and confirm

5 Connect to WiFi

Use **Show** to check the password if needed, then **Hide** to mask it. Tap **CONNECT** to join, or **CANCEL** to return without connecting.

6 Acknowledge the connection

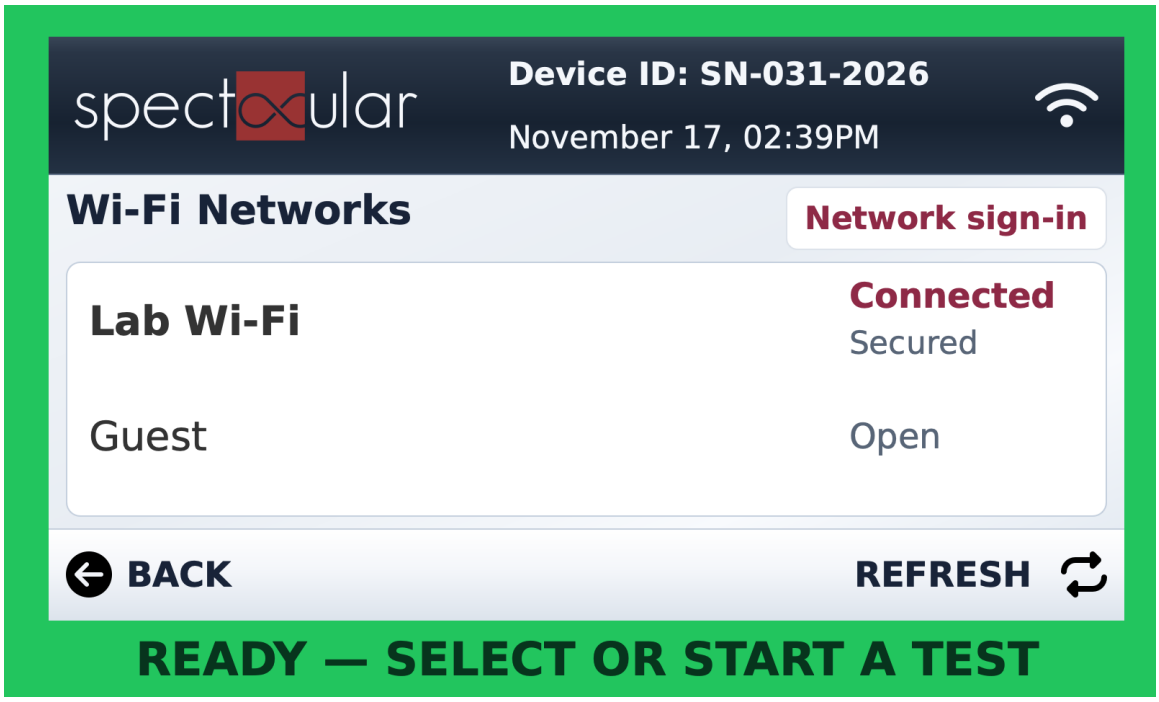

When the message says **Successfully connected to** your network, tap **OK**.

Confirm access and finish

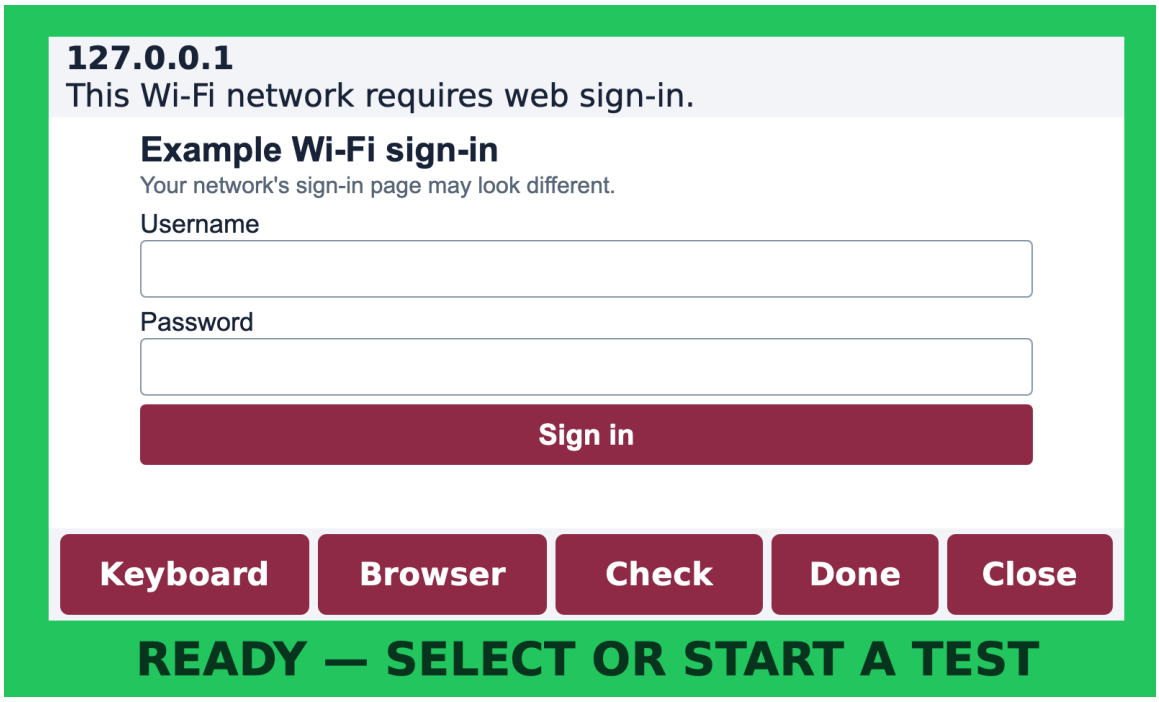

7 Check the connected network

Look for **Connected** beside your network. This confirms the Wi-Fi link. If no web sign-in is needed, **BACK** twice returns to the main menu.

8 Complete web sign in if required

Some networks open an extra sign-in page automatically. If needed, tap **Network sign-in** on the connected list. Tap a field and use **Keyboard** if typing is hidden.

Follow the page's **Sign in** or **Continue** instructions. **Check** rechecks Internet access. The browser's bottom **Done** verifies access and closes when successful; the keyboard's **Done** only hides typing. After the page closes, **BACK** twice returns home.
